

Entegra's Rest API's

Getting Started

- [Overview](#)
- [Authentication](#)
- [Products](#)
- [Orders](#)

Overview:

Entegra API RESTFUL formatında hazırlanmıştır. API URL'leri kaynak adları temelli olup, gelen yanıtlar Json formatındadır. Şuan, mevcut hizmetler E-Ticaret ve E-Market sınıfında ki işik ortakları için kullanıma sunulmuştur.

The Entegra API is formatted in RESTFUL. The URLs of the API is in resource-oriented format and the responses are returned in JSON format. Currently, it provides services for one tier which is Entegra business partners that includes E-Commerce and E-Market Places.

Endpoints: <https://documenter.getpostman.com/view/11428707/TVRha8xQ>

Limits and Durations:

Günlük istek limiti 20.000 dir. Tokenları haftalık olarak güncelleme tavsiye edilen yöntemdir. Normal şartlarda tokenların yaşam süreleri 90 gündür.

Permissions and Ports:

Entegra yapılan isteklere yanıtların dönebilmesi için port 22 nin açık olması gerekmektedir.

Api ve Apiv2 aynı serverda yer almaktadır ve ssl tanımlidir. Bu nedenle 443 nolu porta izinler tanımlanmalıdır.

Errors:

En siklikla karsilasilan hata Entegra not found veya time out (500 ve uzantilari) hatalardir. Bunlarin kaynaklanmasi durumunda dikkat edilmesi gereken hususlar su sekildedir:

- Entegra kullanıcı izinlerinin tanımlandığından emin olmak.
- Entegra api kullanıldığından emin olmak.
- Entegranın açık ve internete bağlı olduğundan emin olmak.
- Tunel izinlerinin tanımlı olduğundan emin olmak.

Authentication:

Authenticaton token temellidir ve iki basamaktan oluşmaktadır. Kullanıcılar Entegra programi için tanımlanan kullanıcı ismini ve şifresi kullanmalidirlar.

The authentication is token based and it consist of two main steps. The clients must use their existing Entegra credentials for creating user permission.

First Step:

Example Code:

```
curl --location --request POST 'https://apiv2.entegrabilisim.com/api/user/token/obtain/' \
--header 'Content-Type: application/json' \
--data-raw '{
  "email": "username@entegrabilisim.com",
  "password": "userpassword"
}'
```

Second Step:

This step is to be used when token expires after 90 days.
